Q-1. Create student details form where user can take input for student name, roll number and marks and show that details in table view below form.(Mandatory to make responsive UI using autolayout constraints).

Part A: UI Design using Storyboard

Create a single view application with the following UI elements using Storyboard only:

1. UILabel – App Title ("Student Details")
2. UITextField – Roll Number
3. UITextField – Student Name
4. UITextField – Marks
5. UIButton – "Add Student"
6. UITableView – To display student records

Instructions:

- Use proper Auto Layout constraints so the UI works on all screen sizes.

Part B: Table View & Custom Cell

1. Design a custom Table View Cell using Storyboard.
2. The cell should contain:
   - Roll Number (UILabel)
   - Name (UILabel)
   - Marks (UILabel)
3. Display student data dynamically in the table view.

Q-2. Using UIImage controller, add an image and do pinchGesture, RotateGesture with image. And add a text: "Your RollNo, Name, Sem and Div" on your screen and if you drag and drop text then text should be move on position on which you just drag your text.

Q-3. Add swipe gesture to view and according to swipe direction colour and text should be change.

Direction	View BackgroundColor	Text on view
Left	Red	Swipe Direction: Left
Right	Yellow	Swipe Direction: Right
Top	Green	Swipe Direction: Top
Bottom	Blue	Swipe Direction: Bottom

Q-4. Design an iOS application using Storyboard where a view performs different animations when buttons are tapped.

Requirements

Part A: UI Design using Storyboard

Create a Single View Application with the following UI elements:

1. UIView – Animated View (center of screen)
2. UIButton – Move
3. UIButton – Scale
4. UIButton – Rotate
5. UIButton – Fade
6. UIButton – Reset

Instructions:

- Use Auto Layout to center the view.
- Place buttons at the bottom using Stack View.
- Initial color of the view: System Blue

Part B: Animation Implementation

Perform the following animations on the UIView:

Button	Animation
Move	Move view to the right
Scale	Increase size (1.5x)
Rotate	Rotate view by 180°
Fade	Reduce alpha to 0.2
Reset	Restore original state

Use UIView.animate() method.
